AB Under arm and under arm/**breast** perspiration shields to absorb perspiration and protect clothing are disclosed. In general, the perspiration shields are adapted to attach to the side strap, cup, or other portion of a bra and extend into the under arm and, in some embodiments, the **breast** regions to absorb perspiration. The absorbent portion of the perspiration shields may be made of a number of layers of material, including absorbent layers interspersed with substantially impermeable layers. In some embodiments, the perspiration shields may attach to the bra strap using an attachment portion which folds over the strap. The attachment portion, and other portions, may be provided with fabric adhesive to aid in attachment. In other embodiments, fabric adhesive may be provided directly on an absorbent portion of the perspiration shield to effect attachment.

AB Methods of improving detection of cancerous lesions in the **breast** through **breast** examination are provided. Such methods comprise administering to a patient in need of a **breast** examination, an androgen, preferably testosterone or a derivative thereof, in an amount sufficient to reduce the palpable **breast** tissue density or radiographic **breast** tissue density of the patient. Methods of treating conditions associated with dense **breasts** in a patient are also provided. Such methods comprise administering, a biologically effective amount of an androgen to a patient in need of the same. In accordance with the present invention, it has been found that administration of testosterone to pre- and

post-menopausal women with fibrous or dense **breasts** results in a decrease in palpable **breast** density, radiographic density, and the number or size of fibrous **breast** lesions in these women.
